Characterization

Product Description AOCS 1116-A has been prepared by AOCS from hemizygous canola genomic DNA extracted from clean leaves. AOCS 1116-A is available in sterile, 0.5ml skirted screw-cap self-sealing tubes. Each sample contains approximately 36.9 µL at a concentration of 271.1 ng/µL. Users are informed that this reference material has been produced from genomic DNA extracted from clean leaves of Ms11 canola breeding line: N90-740 delivered by BASF Agricultural Solutions Seed US LLC.

Homogeneity Ten packaged samples, 10 µg each, were tested using event-specific qualitative PCR methods developed and validated by BASF Agricultural Solutions Seed US LLC. Test results received from Eurofins-GeneScan, New Orleans, LA (an ISO 17025 accredited laboratory) for qualitative, event-specific analysis were all consistent with the reported presence of the Ms11 trait.

Stability AOCS Certified Reference Materials are tested for stability on an annual basis and certificates may be extended based on the outcome of this testing. Customers may request extended certificates, but they are informed that results are based on samples that are obtained from AOCS' inventory. AOCS cannot guarantee the integrity of samples outside of our control.
