Characterization

Product Description AOCS 0306-F9 has been prepared by AOCS from hemizygous canola genomic DNA extracted from clean leaves. AOCS 0306-F9 is available in sterile, 0.5 mL skirted screw-cap self-sealing tubes containing approximately 10 µg of DNA. Each sample contains approximately 45.3 µL at a concentration of 194.3 ng/µL. Users are informed that this reference material has been produced from genomic DNA extracted from clean leaves of Ms8 canola by BASF Agricultural Solutions US LLC.

Homogeneity Ten packaged samples were tested using event-specific qualitative PCR methods developed and validated by BASF Agricultural Solutions US LLC. Test results received from FoodChain ID, Fairfield, IA (an ISO 17025 accredited laboratory) for qualitative, event-specific analysis were all consistent with the reported presence of the Ms8 trait.

Stability AOCS Certified Reference Materials are tested for stability on an annual basis and certificates may be extended based on the outcome of this testing. Customers may request extended certificates, but they are informed that results are based on samples that are obtained from AOCS' inventory. AOCS cannot guarantee the integrity of samples from batches that we no longer have inventoried.

Analytical Method Used for Certification

FoodChain ID Testing, LLC, Chantilly, VA (an ISO 17025 accredited laboratory) performed event-specific real-time PCR for Ms8 to validate the presence of the Ms8 trait.

Warnings and Precautions

This product is for laboratory use only and is not for consumption. The user of this CRM should follow safety requirements and rules issued by voluntary organizations and government agencies expert in the field of laboratory safety.

Intended Use

This CRM, AOCS 0306-F9, is intended for use as quality control material or calibrant in methods for the detection, identification, and/or quantification of biotechnology-derived events.

Instructions for Use

Upon receipt the product should be stored in a sealed container at +4 °C in the dark. The product may have redistributed during shipment, therefore, centrifuge the vial to aggregate the sample at the bottom of the vial before use.

If the user of this CRM intends to use it multiple times, proper protocols must be followed to ensure that the sample retains its integrity. Use a clean pipette to extract the intended

sample amount. Close the lid on the vial and rewrap with new parafilm. Store the CRM +4 °C in the dark and repeat this process for all subsequent uses.

Recommended test portion: minimum of 200 ng or the test portion recommended in your validated method

Protocols have been followed to ensure that this CRM has the presence of the Ms8 trait. Please follow all instructions on this certificate to prevent contamination of the CRM.

Note: The AOCS 0306-F9 certification report is available online and a paper copy will be supplied upon request.
